1. Upload API

- Endpoint: /upload
- Method: POST
- Description: It accepts a CSV file containing product information and image URLs, validates the formatting, and returns a unique request ID.
- Request:

    Headers: Content-Type: multipart/form-data

    Body:

      Form-data:

          file: CSV file containing the product data.

- Response:

    Status: 202 Accepted

    Body:{

        "requested": "unique_request_id"

    }

2. Status API

- Endpoint: /status/:requestId
- Method: GET
- Description: Checks the processing status of the given request ID.
- Request:

    Headers:

        Content-Type: application/json

    Params:

        requested: Unique identifier of the request.

- Response:

Status: 200 OK

Body:

```json
{

 "requested": "unique_request_id",

 "status": "PENDING", "PROCESSING", "COMPLETED", "FAILED"

}
```
